

Trade 3-way ladder

Youngman's trade version of the 3-way ladder can be configured as a step ladder, a stairway ladder or an extension ladder with a working height of more than 3m. It's certified to DIN EN 131 and has a stabilising bar and restraining bars for safety. It should fit into the back of most cars and its weight shouldn't be a problem.

Teflon added

International's new One Coat Tile paint and Furniture and Cupboard paint now include Teflon in the formulation. One particular use for these paints is in kitchens and bathrooms where grime and grease build-up requires a tough and washable surface.

Big wipes get better

Sycamore UK's Big Industrial Wipes now have an anti-bacterial action which will kill 99.68% of listeria,

Staphylococcus, e-coli and salmonella within 30 seconds, making them ideal for hand cleaning when

on-site cleaning facilities are limited. These wipes will remove oil and waterbased paints with ease, as well sealants and grease. They are also now available in 250 tubs. Really stubborn stains make require Industrial+, a new product which is soft and absorbent on one side with a mild abrasive on the other.

Handy Polyfilla packaging

You can now get Polyfilla One Fill in 200ml tubes and 380ml cartridges that enable the lightweight filler to be directly applied to damaged areas.

This filler is suitable for both interior and exterior use on most substrates – even polystyrene. As it contains microscopic glass beads, relatively large holes and cracks can be filled without sagging or slumping, even on ceilings. You only have to wait 15 minutes before painting, and there's no need to sand beforehand.

Quick access

The Dutch designed Triangular Bridge scaffolding system from Sterk Systems provides a 12m span that weighs less than 50kg, rests on two supports and can be erected by two people in 15 minutes. In operation, the adjustable supports are placed against the wall and stabilised, then the bridge section is assembled on the ground and manoeuvred into place used an integral hand winch. Floorboards, safety handrails and end rails are then attached. The system is tested to full European safety regs.
