## Big Wipes makes changes to formula and fabrics

Big Wipes has strengthened its 4x4 range of industrial strength wipes. The formula contains aloe vera, lanolin, vitamin E and glycerine, all helping to nourish and protect the skin. Big Wipes are also now 100% preservative free.

Big Wipes 4x4 products also continue to offer a >99.9% anti bacterial protection, with zero levels of irritation recorded during controlled testing by dermatologists, under EU Regulation 1223/2009 for cosmetic products.

Not only has the formula been upgraded, the bigger, thicker and tougher fabrics have been too. Red Top Heavy Duty features blue scrub and clean fabric. Black Top Multi Purpose has been upgraded to a power fabric. Green Top Multi Surface now offer super absorbent, biodegradable wipes, suitable for applications involving the removal of non-hazardous substances.

## Giacomini brings manufacturing back to EU

European supplier and producer of plumbing equipment, Giacomini, has identified key opportunities for reshoring - bringing manufacturing back from China and the Far East to the EU. Giacomini UK offers its customers a comprehensive range of European designed and manufactured plumbing equipment, valves and fittings. It also offers a UK underfloor heating design and installation service and is a market leader in heat interface units.

The south Gloucestershire-based firm is the UK marketing arm of the giant Italian Giacomini group, which has one of the most modern and sophisticated manufacturing facilities for this type of equipment in the European Union - the perfect ingredients for re shoring production back.

All products are made in Italy and meet EU and UK regulations and requirements. This is a key factor according to Matt Lowe, managing director of Giacomini UK, as installers and specifiers increasingly move their allegiances away from Far East and Asian produced equipment back to EU suppliers.

## Rinnai commits to extensive training programme

Rinnai UK is offering installers training on its range of continuous flow gas fired water heaters. Rinnai has tailored a series of training courses to enable installers to reduce running costs and integrate renewables into hot water systems.

Rinnai's training courses cover technologies for commercial water heating and highlight where energy and monetary savings with a continuous flow hot water system can be achieved. Basic Product Training, is aimed at engineers who have very little experience of Rinnai appliance and designed to give engineers and installers an understanding of continuous flow technology and its benefits over other domestic hot water systems (DHW). The Renewable Energy Pre-Heat module demonstrates the benefits and design criteria for a renewable pre-heat DHW system linked in with a continuous flow system. Courses cover service and fault diagnostics, designing systems and the latest legislation.

## Salus expands range of wireless heating controls

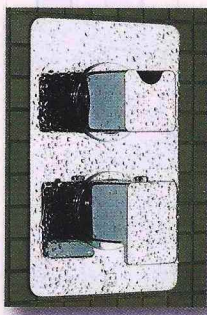

A new range of electronic radio frequency (RF) wireless heating controls from SALUS has been launched, the ERT20RF and ERT20TX. These models separate the operating functions into two units - receiver and thermostat.

Designed to replace residential thermostats and for use with electric, gas or oil heating control systems, both ERT20RF and ERT20TX comprise a separate receiver that is used for switching the boiler on and off, together with a thermostat for the user interface and temperature sensing control. While a 16 amp receiver comes as standard with the ERT20RF, it may be purchased separately for the ERT20TX, allowing choice and flexibility.

The two separate units are linked together by an RF signal and are able to interact with each other. Both models boast an **accurate dial** thermostat, designed for use in both Volt Free and AC heating applications, and feature LED indication. Requiring no external power supply, **RF thermostats** may be wall-mounted in any appropriate temperature sensing location, up to 60 metres away from its receiver.

## VADO upgrades its thermostatic valves

VADO has upgraded its thermostatic valves. All VADO thermostatic valves now have a new polymer cartridge fitted as standard.

The cartridge prevents limescale build up, reducing maintenance and increasing the life span of the valve. VADO has also created two new valve designs to complement the popular Phase and Photon ranges, as well as reducing the size of the Notion and Mix valve faceplates.

The Celsius square valve faceplates have a new look too, they now feature smaller plates with rounded corners. Re-designed mortar guards, which now feature markings to aid installation and tiling, complete the upgrade.
